State of the Coast Report 2001-2002 is the third of a series of annual reports produced by the CZM Authority and Institute. This edition is a compilation of data for the years 2001 and 2002 containing critical analysis and discussion on activities within Belize's coastal zone. Topics covered in this edition include:

- Status of Belize's Reefs
- State of the Marine Protected Areas of Belize
- Status of the Fishery Industry
- Coastal Development and the EIA Process in Belize
- Community-Based Planning in the Coastal Zone

The feature article for this edition is "Accounts Overdue" which builds on the ongoing national discourse on the economic contribution of the coastal resources and the need to re-invest a portion of this economic gain into management of the resource base.
