Tarpon (*megalops atlanticus*)

Common Names

- Abalitsa
- Savanilla
- Bass
- Big Scale
- Atlantic Tarpon
- Silver King
- Jewfish
- Sabalo
Physical Description

The most distinctive feature of the tarpons is their large shiny silver scales on their sides.

The lower jaw (mandible) of a tarpons is large and extending far beyond the opening of the mouth (gape).

All the fins of the tarpon are composed of small moveable joints (soft rays)
- The anal fin contains 22-15 soft rays
- The dorsal fin contains 13-15 soft rays
- The pelvic and pectoral fins contain 13-14 soft rays

From above they appear dark blue or greenish black

The tail (caudal) is deeply forked and both lobes appear equal in length
